

Innovative enterprise 'INFRA Technologies' – member of Technopark – is a world leader of indirect gas-to-liquids transformation (GTL technology).

Official status of technopark in 2015 was also gained by Troitsk Technopark 'TISNCM'. The Technopark specializes mainly in the competencies of The FSBI TISNCM (The Technological Institute For Superhard and Novel Carbon Materials), including development and production of cutting tools with nanocoating and diamond single crystals instruments as well as certification of materials and products, securing intellectual property rights. In the near future the Technopark will create 350 jobs.

All three technoparks are part of the developing investment project 'Startup-City', which aims to develop the south of Troitsk in the interests of science and innovations. The 'Startup-City' includes The Nanocenter 'Technospark', The Technopark 'TISNCM', The Technopark FIAN, The Business-park 'Aspirant', The Industrial park 'PT – Asset Management', scientific and educational center, diamond center, residential complex 'The Legend'.

The municipal business-incubator (management company LLC 'Russian Technoparks') as part of the innovative infrastructure of Troitsk lends its full support to small business on its early stages and searches for innovation projects to attract investment.
